

## DST's presence at Expomin 2023

On April 24-27, 2023, Dundee Sustainable Technologies (DST) participated as an exhibitor at Expomin 2023, the largest mining show in Latin America held in Santiago, Chile.

Jean-Philippe Mai, President and CEO, and Olivier Sanfaçon, Process Engineer, represented DST at the event.

Through several B2B meetings and their presence at the DST booth, they were able to establish numerous contacts and promote the company and its two innovative and environmentally friendly technologies for the treatment of materials in the mining industry, the GlassLock Process™ (arsenic stabilization) and the CLEVR Process™ (gold extraction).

In addition, Mr. Mai's participation in the Water Stewardship Panel organized by MSTA Canada provided an opportunity to discuss DST's approach to water management in its operations using its technologies.

Finally, the technical presentation "Arsenic Stabilization by Vitrification: the Industrial Implementation Story" by Mr. Mai was another way to showcase the GlassLock Process™.

We can therefore conclude that DST's participation at Expomin 2023 was a success!
