

## DST at Investing in African Mining Indaba 2023

From February 6th to 9th, Jean-Philippe Mai, President & CEO of DUNDEE Sustainable Technologies Inc. (DST), and Brent Johnson, VP Environmental Performances and Sustainability, represented DST at the Investing in African Mining Indaba event in Cape Town, South Africa.

Through Mr. Mai's participation in the "Rendez-vous minier francophone 2023" panel, which focused on the success factors for mining in Africa, and a booth for DST in the Canada Pavilion, organized by the Mining Suppliers Trade Association Canada - MSTA CANADA, there were many opportunities to promote DST and continue to build interest in its environmentally friendly processes - the CLEVR Process™ and the GlassLock Process™.

Thus, Mining Indaba, as an event dedicated exclusively to the capitalization and development of mining interests in Africa, was an opportunity for DST to interact with various companies in order to facilitate business development and strengthen its presence in the African territory. It also allowed DST to inform some governments of African countries on its performance and benefits of its processes.
