

DST at PDAC 2023

From March 5 to 8, DST participated as an exhibitor at PDAC 2023 in Toronto, Canada. Thanks to Jean-Philippe Mai, Brent Johnson, Loretta Karen Leigh and Joey Isabelle, lot of connections were made on site and in town. The meetings mostly took place during B2B and roundtable discussions, but also at the DST booth.

An interview with Tamer ELBOKL, Editor-in-Chief at the Canadian Mining Journal, about DST's novel and environmentally friendly gold extraction and arsenic stabilization metallurgical processes was also conducted.

As such, this event was an opportunity to promote the company once again, but especially to highlight its environmentally friendly processes - the CLEVR Process™ (gold extraction) and the GlassLock Process™ (arsenic stabilization).
