

## **DST at SIM Dijon 2024**

From October 1 to 4, 2024, the 73rd Congrès Exposition de l'industrie minérale was held. This year, the Sim congress-exhibition was held in Dijon, France. Our President and CEO, Jean-Philippe Mai, attended as the company representative.

He took part in the Technical Workshop 2 on the reindustrialization of former sites and valorization of secondary materials as a speaker. On Wednesday, October 2, he took the floor to discuss the application of innovative metallurgical processes for the mining industry

On the same Wednesday, he also had the opportunity to take part in the mineral industry evening held at the Château de Marsannay.

Finally, it should be noted that following Dundee Sustainable Technologies' participation in this event, an article on the same subject as Mr. Mai's presentation will be published in SIM's Mines & Carrières magazine in 2025 (date to be confirmed).
