

DST at GRX26

At the beginning of May, Brent Johnson, our VP Environment, was in Perth, Western Australia for the GRX26. DST had been selected as a finalist for the Global Open Innovation CoLab Challenge (one of the six finalists out of over 50 companies).

As such, Mr. Johnson represented DST and successfully presented on stage our GlassLock Process™, for the removal and stabilization of arsenic, to the public and judges of the challenge.

Even if we did not win this challenge, we are grateful for this recognition. And it's important for us to note that our participation in the GRX26, along with site visits, various B2B meetings, and other networking events, has opened up many opportunities that we look forward to exploring.

GLOBAL OPEN INNOVATION COLAB CHALLENGE
