

## DST at PDAC 2026

At the beginning of March, five of our members - Arved Marin, Brent Johnson, Olivier Sanfaçon, Antoine Maltais and Arianne Boily - were in Toronto for PDAC 2026.

Their presence at our booth, as well as at various meetings, roundtables, sessions and other events was an excellent opportunity to showcase our technologies, the CLEVR and GlassLock processes (cyanide-free gold extraction and arsenic stabilization processes), explore new opportunities and reconnect with numerous companies.

During the event, DST, represented by Mr. Johnson, was featured in a Podcast from The Northern Miner in a [Spotlight Interview](#). Hosted by Adrian Pocobelli, it was discussed in this interview how DST's cyanide-free gold extraction process and arsenic vitrification technology are reducing the environmental footprint of mining.
