

DST at the COM 2026

At the end of August, Jean-Philippe Mai (President & CEO) and Alexandre Landry (Chemist) were in Calgary, Canada for the 65th Conference of Metallurgy and Materials. As part of the technical program, DST's paper on the GlassLock Process™ was presented by Alexandre on the second day of the event (bravo!).

At the Banquet Awards, DST also received the 2026 **MetSoc Innovation Award** in recognition of our innovative and environmentally responsible technology for stabilizing arsenic in the mining industry – GlassLock! This award supports the important role of innovation as a fundamental foundation to the development and growth of the Canadian metallurgical industry. Supported by Hatch, the award recognizes outstanding innovation in the industry.
